

```
return templates.TemplateResponse("result.html", {
    "request": request,
    "username": username,
    "user_id": user_id,
    "age": age,
    "weight": weight,
    "goal": goal,
    "intensity": intensity,
    "workout_plan": plan,
    "nutrition_tip": nutrition_tip
})
```

- This allows dynamic plan and nutrition tip display after form submission.

Bind Backend Data to HTML Templates

➤ index.html

- Form elements use `name="..."` to bind to backend `Form(...)` parameters.
- Submits data to `/generate-workout`.

➤ result.html

- Uses:
 - `{{ username }}`, `{{ goal }}`, `{{ intensity }}`, etc. to show user data.
 - `{{ workout_plan }}` and `{{ nutrition_tip }}` to show AI-generated results.
- Includes a feedback form submitted via POST to `/submit-feedback`.

➤ all_users.html

- Loops over all user records using:

```
</tr>
{% for user in users %}
<tr>
    <td>{{ user.id }}</td>
    <td>{{ user.name }}</td>
    <td>{{ user.age }}</td>
    <td>{{ user.weight }}</td>
    <td>{{ user.goal }}</td>
    <td>{{ user.intensity }}</td>
    <td><pre>{{ user.original_plan }}</pre></td>
    <td><pre>{{ user.updated_plan }}</pre></td>
</tr>
{% endfor %}
```

Milestone 5. Deployment

Now, the focus is on deploying the **FitBuddy** application on a local system using **FastAPI** and **Uvicorn**. The app uses **HTML templates rendered with Jinja2**, alongside AI services powered by **Gemini**. This milestone ensures all environment dependencies are correctly installed, and the app runs smoothly on a local server, preparing it for future deployment on cloud platforms.

Activity 5.1: Preparing the Application for Local Deployment

Set up a virtual environment

- Create a virtual environment to manage dependencies and isolate the FitBuddy project from other environments.
- Activate the environment and install all necessary dependencies listed in the [requirements.txt](#) file, including FastAPI, Uvicorn, SQLAlchemy, and Google Generative AI SDK.

```
python -m venv venv  
source venv/bin/activate # On Windows: venv\Scripts\activate  
pip install -r requirements.txt
```

Configure environment variables

- Use environment variables to store sensitive data such as the Gemini API Key.
- These variables can be set directly in the terminal or added to a [.env](#) file which is loaded into the application using [python-dotenv](#).
GOOGLE_API_KEY=your_gemini_api_key_here

Frontend-Backend Rendering via Jinja2

All user interactions are facilitated via **Jinja2**-rendered templates:

- `index.html`: Collects user inputs
- `result.html`: Displays the generated AI plan
- `all_users.html`: Lists all user records for admin view

Activity 5.2: Testing and Verifying Local Deployment

Access the Application Locally

The FastAPI development server must be started using the command (**uvicorn main:app --reload**). Once the server is running, the application can be accessed through any web browser by navigating to `http://127.0.0.1:8000`. This URL loads the main user interface where individuals can input their details and generate personalized fitness plans. Additionally, the interactive API documentation provided by FastAPI can be viewed at `http://127.0.0.1:8000/docs`, allowing developers to explore and test available endpoints.

Exploring Website's web pages:

Home page:

FitBuddy - AI Workout Generator

Name:

User ID:

Age:

Weight (kg):

Fitness Goal:
e.g., weight loss, flexibility

Workout Intensity:

Generate Plan

Description: The homepage of **FitBuddy – AI Workout Generator** features a clean and engaging user interface designed to provide a seamless experience for users seeking personalized fitness plans. The form prominently displayed in the center allows users to enter essential information including:

- **Name**
- **User ID**
- **Age**
- **Weight (kg)**
- **Fitness Goal** (e.g., weight loss, flexibility)
- **Workout Intensity** (Low, Medium, High)

Once users submit this data, they can click the **"Generate Plan"** button, which triggers the AI-powered backend to generate a customized workout and nutrition plan tailored to their goals and fitness profile. The visual appeal of the background image featuring an active individual reinforces the fitness-centric theme of the application, motivating users to take charge of their health journey.

This intuitive design ensures users of all experience levels can quickly get started with minimal effort.
